PROFESSIONAL PROFILE

Systems administrator and developer with 4+ years of experience combining cloud/on-premise infrastructure operations and backend/full-stack development. I manage and optimize AWS and Azure environments, orchestrate containers with Docker and Kubernetes, implement CI/CD pipelines, and set up log and metrics monitoring to ensure availability and early incident detection. Experienced in access management, system security, and end-to-end technical support, focused on reducing repetitive work through automation. My development background (.NET, Angular, systems architecture) gives me a complete view of the application lifecycle, from code to the infrastructure that supports it.

PROFESSIONAL EXPERIENCE

Developer & Systems Administrator — Own Projects / Freelance

2023 — Present

Infrastructure development and operations (SaaS + ERP)

Córdoba, AR

- Administration and optimization of cloud (Azure, AWS) and on-premise infrastructure: resource sizing, networking, databases, and load balancing, adapting pre-existing infrastructure to each system's needs.
- Container orchestration with Docker and Kubernetes for deployment, scaling, and high availability of production applications.
- Implementation of CI/CD pipelines to automate build, testing, and continuous deployment of 5+ production systems.
- Monitoring and observability (logs, metrics, alerts) on costs, resources, and service health for early anomaly and incident detection.
- Access management and data security across cloud and on-premise environments, including system hardening and client infrastructure protection.
- Azure Redis for caching and performance optimization in high-traffic applications.
- Technical support and incident response: diagnosing and resolving production issues while minimizing downtime, and automating repetitive tasks.
- Design and deployment of 5+ production systems with .NET and Angular: POS/ERP, gym SaaS, and e-commerce with MercadoPago integration.
- Critical query optimization in EF Core using DTO projections and AsNoTracking, achieving sub-second response times on high-volume listings.
- AI integration (OpenAI, Anthropic) and automation with n8n: chatbots, document classification, webhooks, and API orchestration.

Professor — Programming III & Software Engineering

Jan 2026 — Present

Instituto Técnico Superior (ITS)

Córdoba, AR

- Teaching data structures, OOP, and system design, with a focus on agile methodologies and architecture patterns.
- Capstone project mentoring applying Clean Architecture and software engineering best practices.
- Integration of AI and automation tools into the curriculum.

Backend Developer

2023

No Country (job simulation)

Remote

- REST APIs in ASP.NET Core within a Scrum team, applying SOLID and Clean Architecture on PostgreSQL.

FEATURED PROJECTS

POS / ERP — Sales, Inventory & Accounts Receivable

- Complete modular system (Angular + .NET) with sales, cash register, inventory, suppliers, and accounts receivable history, deployed and monitored in production.
- Accounts receivable with FIFO payments, consistent balances, and full traceability for every transaction.

- n8n automations for low-stock alerts and cross-module synchronization. Reports with QuestPDF.

SC Dental — Clinic Management + Landing Page

- Digital ecosystem with public landing page and internal scheduling, clinical records, and patient flow system.
- Azure architecture with SQL Server, in production at scdental.com.ar, with resource administration and availability monitoring.
- Identity Server authentication and AI integration for scheduling suggestions.

TECHNICAL STACK

DevOps & Infrastructure. Kubernetes, Docker, CI/CD pipelines, log and metrics monitoring, access management and security, cloud resource optimization, on-premise infrastructure, technical support and incident response.

Cloud. AWS, Azure (App Service, SQL, PostgreSQL, Redis), Docker, CI/CD.

Backend. C#, ASP.NET Core, EF Core, LINQ, Clean Architecture, SOLID, Design Patterns.

Frontend. Angular, TypeScript, RxJS, Angular Material, Tailwind CSS, React.

Databases. SQL Server, PostgreSQL, Redis, query optimization, indexes, DTO projection.

AI & Automation. OpenAI API, Anthropic Claude, n8n, LLM integration, prompting.

Methodologies. Scrum, Agile, Unit Testing, QuestPDF, MercadoPago.

EDUCATION

Associate Degree in Software Development <i>Instituto Técnico Superior (ITS)</i>	2021 — 2023 Córdoba, AR
--	----------------------------

LANGUAGES

Spanish — Native

English — B2 (Upper Intermediate)
